Summary

Full-stack developer with hands-on experience building backend-driven web applications using C#, ASP.NET Core, and SQL. Developed multi-user systems with REST APIs, database integration, and business logic. Strong focus on building reliable, testable applications and quickly adapting in team-based environments.

Technical Skills

Languages: C#, Java, JavaScript, HTML/CSS, SQL, TypeScript, Dart, Python
Frameworks: React, Node.js, ASP.NET Core, Entity Framework Core, Blazor, Django
Developer Tools: Git, GitHub, VS Code, Visual Studio, Postman, Android Studio, IntelliJ IDEA, Figma
Databases: MySQL, PostgreSQL, Oracle

Experience

Capstone | *Python, Django, SQLite, MySQL, CSS, Git, GitHub* — Sep 2025 – Dec 2025

TrustBix — *Edmonton, AB*

- Engineered the **annotation** canvas for a Django-based labeling tool, adding bounding-box creation, repositioning, resizing, and editing features for **plant image annotation**
- Contributed to a **YOLOv8** auto-annotation pipeline by labeling hundreds of training images, helping the model reach **~80%** annotation accuracy
- Developed **health-metric calculations** that classified plant imagery as healthy, dying, or damaged based on aggregated annotation data.
- Built data utilities to aggregate label counts, calculate **percentages**, and generate **snapshot-level** health scores for downstream analysis.

Projects

Hackathon: Pomodoro Timer | *TypeScript, Next.JS, HTML, CSS, Git, GitHub* 2025 — Feb 2025

- Built a Pomodoro timer web application within a **48-hour hackathon**, implementing accurate timer functionality and smooth user interactions in **JavaScript**
- Collaborated with teammates using **Git/GitHub** for version control, resolving **merge conflicts** and ensuring code integration
- Designed the front-end UI using **Figma**, and implemented it using **Next.JS** and **Material-UI,** focusing on accessibility and user experience

Swipify | *Flutter, Dart, Git, GitHub, OAuth 2.0, REST APIs* — Sep 2025

- Built a Flutter-based mobile application that allows users to swipe through **50+** Spotify tracks and manage playlists using the **Spotify Web API.**
- Integrated Spotify Web API endpoints to **retrieve** playlist data, track metadata, and remove tracks across **hundreds** of songs and playlists.

Sales and Return System | *C#, ASP.NET Core, Entity Framework, LINQ, SQL, xUnit* — Jan 2025

- Developed a multi-user web application simulating a retail sale and returns workflow, handling **100+ transaction** records using **C#** and **ASP.NET Core.**
- Implemented database operations using **Entity Framework, LINQ**, and **SQL**, to retrieve, filter, sort, and update thousands of records efficiently
- Wrote **xUnit tests** to validate business logic, including null checks and edge-case handling, to improve application reliability.

Education

Northern Alberta Institute of Technology — Edmonton, AB

Diploma in Digital Media and Information Technology | *Computer Software Development* — *Jan 2024 – Dec 2025*

- Courses: Web-Application Design, System Foundations, Database Management, Business System, Front-End Development, Application Development, Advanced Communication, Project Management, Mobile App Development
